Myers Park Streambank Stabilization_1.pdf;
Hi Kathy,

I don't recall if we discussed this project on our recent 4/27 call, but please see attached; of course, please let me know if you have any questions!

Thanks much,

C.J.

Hi Joe and Tee-Ann,

There are two separate proposed projects for Myers Park: one is for Streambank Stabilization (attached) and the other is the Waterfront Redevelopment Project. I think you may be referring to the former, based on what the IO is seeking (see attached letter from Kathy Bertuch at CNYRPDB) but please let me know if otherwise.

As for the Streambank Stabilization project, the Town intends to install approximately 354 linear feet of rip-rap for shoreline protection on Salmon Creek within Myers Park. Our Parks & Rec Supervisor has estimated the materials cost at \$25K; his team can provide the labor. NYSDEC has granted Permit approval for the project).

There is another small erosion control / streambank stabilization project further upstream on Salmon Creek that Scott Doyle at County Planning and TCSWCD have been preparing project designs for – and I think the estimated cost is about \$10K – but I believe that is located on private property and thus not part of these Myers Park improvements.

Does this help? Please let me know if you need any further information!

Thanks much,

C.J.

Subject: Watershed projects.

Hi

I just had a conversation with Tee-Ann Hunter <THunter@town.ithaca.ny.us>. The IO is looking for waterfront re-vitalization projects that they will be trying to help find funding for. She agreed that the Meyer's Park plan that we submitted for a grant last year is the right kind of project for their portfolio. Could you forward that proposal to her?

Thanks

Joe
